

ART. AL6002

VERTICAL AUTOMATIC LOADER

THE AL6002 AUTOMATIC LOADER
MANAGES VARIOUS GLASS SHEET
SIZES FOR BOTH VERTICAL AND
HORIZONTAL CUTTING LINES.

VERTICAL CUTTING LINE

LAMINATING LINE

EDGE PROCESSING

INSULATING GLASS

Separation of the glass sheets during the initial loading process is enhanced by using an independently driven suction cup to create a gap between the 1st and 2nd glass sheets, into which compressed air is injected to achieve rapid and complete separation, even when the sheets are difficult to separate.

The loader's main lifting suction cups are equipped with a special fail safe vacuum system for added security during the loading process.

It features built-in software that is fully integrated with the vertical cutting line, allowing total automation.
